

Rail Money Design System

Shareable reference generated from DESIGN.md for Rail Money product and design work.

Rail Money should feel like a serious consumer finance product: clean, bright, direct, and trustworthy. The app can borrow the warmth and punch of Family's palette, but the visual language is Rail's own: precise money UI, restrained surfaces, SF Pro typography, SF Mono numbers, and clean ASCII-inspired imagery instead of illustrated characters or playful story scenes.

Direction

Rail is a money movement and wealth app. The interface should feel calm enough for banking, fast enough for payments, and distinct enough to be memorable. The design should be smooth and modern, but never cute, game-like, childish, or adventure-themed.

Use:

- Warm off-white canvases and soft stone surfaces.
- Bright accent colors for action, status, and market movement.
- Rounded controls with crisp hierarchy.
- SF Pro Display for interface text.
- SF Mono for money, account data, balances, codes, and ASCII imagery.
- Real product context, financial data, and generated ASCII-style visuals.
- Smooth surfaces, rounded controls, crisp data hierarchy, and quiet motion.

Avoid:

- Pixar storyboard on cream paper.
- Playful illustrated characters inhabiting a warm off-white world.
- Adventure-game, mascot-led, storybook, toy-like, or cartoon fintech styling.
- Decorative character scenes or cute visual metaphors for money.
- Heavy gradients as the main brand signal.
- Low-contrast gray text on gray surfaces.
- Using orange/red for errors. Error states use coral red.

Visual Language

ASCII Imagery

Rail imagery should use clean ASCII-style compositions: monospaced linework, chart-like grids, terminal-inspired patterns, contour maps, vault diagrams, market traces, routes, card silhouettes, and money-flow diagrams. Imagery should look like a polished financial operating system, not an illustrated world.

Rules:

- ASCII visuals must feel designed, not nostalgic or gimmicky.
- Use SF Mono and tight grid alignment.
- Keep imagery high contrast, sparse, and data-led.
- Prefer off-white, graphite, ember, green, blue, yellow, and pink accents.
- Use ASCII visuals for onboarding, empty states, loading states, insight cards, and campaign surfaces.

- Use real app concepts as subjects: balances, rails, ledgers, routes, cards, vaults, charts, exchange flows, and account security.
- Do not use cartoon characters, soft 3D mascots, Pixar-like lighting, story panels, or adventure-game scenes.

Image System

Images should reinforce precision and trust. When the app needs a visual, default to one of these:

- ASCII-rendered financial diagrams.
- Monospaced charts and market traces.
- Clean product screenshots or UI-derived compositions.
- Abstract money-flow maps built from lines, dots, numbers, and labels.
- Security and identity visuals built from grids, masks, keys, and account patterns.

Do not generate or commission character illustration, mascot scenes, cozy editorial drawings, clay/3D characters, Pixar-like lighting, or cream-paper storyboards. Rail can be warm through color and spacing; it should be serious through composition, typography, and subject matter.

Color System

Core Neutrals

Token	Hex	Usage
warm-canvas	#fbfaf9	Default app background
stone-surface	#f2f0ed	Grouped panels, inputs, subtle sections
parchment-card	#f8f7f4	Cards and elevated warm surfaces
graphite	#474645	Secondary strong text
charcoal-primary	#343433	Primary text
midnight	#121212	High-emphasis dark surfaces
obsidian	#000000	Max contrast, primary dark buttons
ash	#848281	Secondary text
fog	#c6c6c6	Dividers and disabled borders
smoke	#a7a7a7	Tertiary text
pepper	#282624	Dark elevated surfaces

Accents

Token	Hex	Usage
ember-orange	#ff3e00	Primary brand accent and main CTAs
meadow-green	#00ca48	Positive money movement and growth
sky-blue	#0090ff	Links, information, selected utility states
sunburst-yellow	#ffbb26	Warnings, highlights, rewards
deep-amber	#d48f00	Warning text on light yellow surfaces
ocean-blue	#0086fc	Charts and secondary blue actions
ice-blue	#64c6ff	Soft blue visual accents

Token	Hex	Usage
spearmint	#00c978	Alternate positive accent
flamingo	#ff58ae	Limited expressive accent
violet-pop	#9f4fff	Limited expressive accent
coral-red	#ff2b3a	Errors and destructive states
valid-green	#00c454	Validation and successful completion

Semantic Mapping

Semantic token	Color
primary	ember-orange
background-main	warm-canvas
background-surface	stone-surface
surface	stone-surface
text-primary	charcoal-primary
text-secondary	ash
text-tertiary	smoke
success	meadow-green
destructive/error	coral-red

Color rules:

- Orange is brand/action. It is not an error color.
- Green is reserved for successful or positive money movement.
- Blue is for utility, information, links, and charts.
- Yellow is warning or attention, paired with clear text.
- Every state must include text or iconography, not color alone.

Typography

Rail uses the fonts already bundled in the app.

Token	Font	Usage
font-display	SF Pro Display Bold	Brand moments and large headlines
font-heading	SF Pro Display Bold	Screen titles
font-heading-semibold	SF Pro Display Semibold	Dense section titles
font-subtitle	SF Pro Display Semibold	Card titles and row labels
font-body	SF Pro Display Regular	Body copy
font-body-medium	SF Pro Display Medium	Emphasized body copy
font-button	SF Pro Display Semibold	Button labels
font-caption	SF Pro Display Regular	Labels and metadata
font-mono	SF Mono Regular	Codes and ASCII visuals

Token	Font	Usage
font-numeric	SF Mono Medium	Balances, prices, and account data
font-mono-semibold	SF Mono Semibold	Strong numeric emphasis

Type scale:

Token	Size	Line height	Usage
display	68px	1.09	Rare brand display moments
heading-lg	44px	1.09	Hero headings
heading	23px	1.2	Screen and sheet headings
heading-sm	19px	1.38	Section headings
body	15px	1.47	Default body copy
caption	12px	1.58	Labels and metadata

Typography rules:

- Money and account-like data use SF Mono.
- UI copy and labels use SF Pro.
- Keep letter spacing at 0 by default.
- Use weight and size for hierarchy before reaching for color.
- Do not go below 12px.

Shape, Spacing, And Elevation

Spacing follows a 4px grid with semantic app tokens:

Token	Value
xs	4px
sm	8px
md	16px
lg	24px
xl	32px
xxl	48px

Family-inspired radius tokens:

Token	Value	Usage
sm	2px	Hairline pills and tight badges
md	6px	Compact controls
lg	10px	Inputs and small cards
2xl	17px	Standard cards
3xl	24px	Sheets, large cards, bottom panels
3xl-2	32px	Hero panels
3xl-3	40px	Rare large containers

Token	Value	Usage
full	72px	Pills, avatars, circular controls

Elevation should be quiet. Prefer subtle borders and inset strokes over heavy shadows. Use stronger shadows only for modals and raised overlays.

Components

Primary CTA Button (Pill Dark)

Role: Main conversion action - 'Get Started', 'Download on iOS'

Background #121212, text #ffffff, border-radius 32px, padding 0px 14px. Inter 14px weight 500-600. The near-black pill floats against #fbfaf9 canvas as the site's only dark punch. Hover state likely lightens to #343433 via 0.2s ease transition.

Secondary CTA Button (Pill Light)

Role: Alternative actions - 'Log In', 'Watch the Video'

Background #f6f4ef (warm cream), text #121212, border-radius 32px, padding 0px 14px. Inter 14px weight 500. Creates a paired hierarchy with the dark pill without competing - same shape, inverted warmth.

Ghost Text Link Button

Role: Inline navigation links - 'Watch the demo', section CTAs

Background transparent, text color #ff3e00 (Ember Orange), border-radius 0px, padding 4px 0px. No border. Inter 14-15px weight 500. The underline-less orange text link is the signature inline action - orange on cream reads as warm urgency without a button shell.

Outlined Navigation Button

Role: Tertiary actions in nav or contextual contexts

Background transparent, text #474645 (Graphite), border 1px solid #474645, border-radius 12px, padding 12px 32px 12px 12px. Inter 14px weight 500. Used for modal-adjacent actions that need definition without weight.

Feature Card (White)

Role: Primary content cards - feature descriptions, testimonials

Background white (display-p3 1 1 1), border via inset box-shadow: color(display-p3 0.949 0.941 0.929) 0px 0px 0px 1px inset (warm stone border, ~#f2f0ed), border-radius 10px, padding 32px all sides. The inset shadow technique keeps borders off-layout-flow - cards look hand-placed on the canvas.

Feature Card (Warm Cream)

Role: Secondary content panels - screenshot containers, demo previews

Background #f8f7f4 (display-p3 0.984 0.980 0.976), no box-shadow, border-radius 12px, padding 0px 22.8px 14px 22.8px. Slightly sunken into the page - the warm tint against #fbfaf9 creates a 1-level depth shift without any shadow.

Dark Phone Mockup Card

Role: Product screenshot showcase - wallet UI demonstrations

Background #000000, border-radius 24px (top) 0px 0px 24px (bottom), box-shadow rgba(0,0,0,0.15) 0px 0px 24px 0px, padding 4px 0px 4px 4px. The only true drop shadow on the page - reserved for the product hero moment, making the dark phone pop off the cream background.

Testimonial Card

Role: Social proof - Twitter/X quotes in 'Friends of Family' section

Background white, border via inset stone shadow (same as Feature Card White), border-radius 10px, padding 32px. Contains avatar (circular, ~40px), handle in Inter 13px #848281, body in Inter 15px #474645, X logo icon in top-right. Horizontally scrolling or grid-arranged.

Illustration Character

Role: Decorative brand mascots - blob creatures, emoji animals scattered in hero

Flat illustrated characters using brand palette: Ember Orange, Meadow Green, Sky Blue, Sunburst Yellow, Flamingo. Contained in 72px radius rounded containers or free-floating. No shadow, no border. Characters have expressive faces (dot eyes, smile curves) and stick limbs. Sized 60-120px, clustered around headline.

Navigation Bar

Role: Sticky top navigation

Background #fbfaf9 (canvas), height ~64px, box-shadow rgba(0,0,0,0.04) 0px 0px 0px 1px (barely-there outline). Logo left, nav links center in Inter 14px #343433 weight 500, 'Log In' ghost pill and 'Get Started' dark pill right. Dropdown chevrons on Developers/Resources.

Section Heading

Role: Page section titles

Family typeface 500 at 68px with -2.11px letter-spacing and line-height 1.09 for hero. Inter 600 at 44px with -1.14px letter-spacing for sub-section heads. Color #343433 or #121212. Always left-aligned or centered - no right-aligned headlines.

Colored Action Badge

Role: Transaction type labels inside wallet UI mockups - Send, Receive, Purchase

Circular icon badge: background in brand color (Meadow Green for Receive, Flamingo for Purchase), icon in white, border-radius 40px, ~40px diameter. Acts as the only iconographic navigation within the dark phone card context.

Do's and Don'ts

Do

- Use #fbfaf9 as page background - never pure white (#ffffff) at canvas level; the warm cream cast is the foundation of the tactile feel.
- Apply the inset stone border (box-shadow: color(display-p3 0.949 0.941 0.929) 0px 0px 0px 1px inset) on all white cards instead of a CSS border property - keeps cards off-layout-flow.
- Use border-radius 32px for all pill buttons (both #121212 dark and #f6f4ef light variants) - the pill shape is non-negotiable for interactive elements.
- Apply tight negative letter-spacing to all large text: -2.11px at 68px display, -1.14px at 44px heading-lg, scaling to near-zero at body sizes.
- Restrict the Family custom typeface to display and large section headings only (44px and 68px) - Inter handles all UI text regardless of weight.
- Use Ember Orange (#ff3e00) exclusively for text-link CTAs and illustration accents - never as a button background fill; its power is as an inline pop against cream.
- Space illustration characters asymmetrically around hero text - overlap the headline bounding box with characters to create depth through layering, not z-index stacking.

Don't

- Don't use drop shadows on content cards - the inset warm-stone border is the only surface definition mechanism; shadows appear only on the dark phone mockup and hover-elevated states.
- Don't use pure #ffffff as a page background - it breaks the warm cream identity; #fbfaf9 is the minimum warmth threshold.
- Don't use the illustration characters as pure decoration at small sizes - below 60px they lose their expressive faces and become abstract blobs.
- Don't mix Inter weight 700+ with the Family display typeface - the site uses Inter max weight 600; heavier weights fight the custom font's personality.
- Don't apply Ember Orange (#ff3e00) to more than one UI element per viewport - its rarity is what creates urgency; overuse collapses the hierarchy.
- Don't use border-radius below 10px on cards - the minimum card radius is 10px; anything sharper breaks the soft-edged system.
- Don't use the Violet Pop (#9f4fff), Flamingo (#ff58ae), or Coral Red (#ff2b3a) colors in UI chrome - these are illustration-only accents and have no role in buttons, nav, or body text.

Surfaces

Level	Name	Value	Purpose
1	Canvas	#fbfaf9	Page background - warm off-white with a faint cream cast, not pure white
2	Card Surface	#ffffff	White card faces with a warm inset stone border - floats 1px above canvas visually
3	Recessed Panel	#f8f7f4	Screenshot and demo container backgrounds - slightly warmer than white, sits below card level
4	Stone Tint	#f2f0ed	Button backgrounds (secondary), inset border reference color, hover states on cream
5	Dark Shell	#000000	Phone mockup cards - full inversion for product showcase moments

Elevation

- Feature Card (White): `color(display-p3 0.949 0.941 0.929) 0px 0px 0px 1px inset`
- Dark Phone Mockup Card: `rgba(0, 0, 0, 0.15) 0px 0px 24px 0px`
- Navigation Bar: `rgba(0, 0, 0, 0.04) 0px 0px 0px 1px`
- Elevated Card (hover/active): `rgba(0, 0, 0, 0.04) 0px 1px 6px 0px, rgba(0, 0, 0, 0.05) 0px 0px 24px 0px`

Imagery

Exclusively custom flat illustration - no photography anywhere on the page. Characters are organic blob-shaped creatures with stick limbs, dot eyes, and emoji-like expressions, rendered in vivid primaries (orange, green, blue, yellow) against the warm cream canvas. Illustration density is highest in the hero: 12-15 characters and objects scattered asymmetrically around the headline, creating a 'spilled toy box' composition. Product screenshots appear inside dark rounded phone mockups (border-radius 24px) - contained and framed, never bleeding to page edge. Icons are filled monochrome at small sizes; action badges use filled circles with white icon glyphs. The illustration style is the primary brand differentiator: deliberately childlike but executed with precision - consistent stroke weights, flat shading with no gradients, expressive character design that makes crypto feel approachable rather than intimidating.

Layout

Max-width ~1200px centered on the warm canvas. Hero is full-viewport with centered headline text (Family typeface), flanked by illustration characters positioned left and right of the text column - not a split layout but a 'headline-surrounded-by-friends' composition. Below hero: alternating sections with generous vertical gaps (120-180px). Feature section uses a 3-column card grid (white cards with inset borders). Phone mockup sections show 2-3 device frames side by side on white or cream bands. Social proof section ('Friends of Family') uses a horizontal scrolling card row. Navigation is a fixed top bar with logo left, links center, actions right. Footer is minimal - link grid on canvas background. No sidebar, no mega-menu. Page is text-dominant with illustrations as punctuation, not wallpaper.

Agent Prompt Guide

Quick Color Reference

- Page background: #fbfaf9 (warm cream, never pure white)
- Primary text: #474645 (Graphite)
- Heading text: #343433 (Charcoal Primary)
- CTA button (dark): #121212 background, #ffffff text
- CTA button (light): #f6f4ef background, #121212 text
- Brand accent / link: #ff3e00 (Ember Orange)
- Card border: box-shadow inset ~#2f0ed 1px
- Muted text: #848281

Example Component Prompts

1. Hero Section: Background #fbfaf9. Center-aligned headline in Family typeface 500 at 68px, color #343433, letter-spacing -2.11px, line-height 1.09. Subtext at 16px Inter 400, color #474645, max-width 480px. Two pill buttons below: dark (#121212 background, #ffffff text, 32px radius, 0px 14px padding) and light (#f6f4ef background, #121212 text, 32px radius, 0px 14px padding). Surround headline with flat illustrated characters in orange, green, blue, yellow at sizes 60-120px positioned asymmetrically.
2. Feature Card Grid (3-column): Each card: background #ffffff, box-shadow color(display-p3 0.949 0.941 0.929) 0px 0px 0px 1px inset, border-radius 10px, padding 32px. Heading in Inter 600 19px #343433. Body in Inter 400 15px #474645 line-height 1.47. Product screenshot or illustration inside card on #f8f7f4 panel with border-radius 12px.
3. Testimonial Card: Background #ffffff, inset stone border same as Feature Card, border-radius 10px, padding 32px. Top-right: X/Twitter icon in #474645. User row: circular avatar 40px, name in Inter 500 14px #343433, handle in Inter 400 13px #848281. Quote in Inter 400 15px #474645 letter-spacing -0.20px. Arrange in horizontally scrolling row with 12px gap.
4. Navigation Bar: Background #fbfaf9, height 64px, box-shadow rgba(0,0,0,0.04) 0px 0px 0px 1px. Logo (square icon + 'Family' wordmark) at left in #343433 Inter 500 15px. Center links: Inter 500 14px #343433 with dropdown chevrons. Right: 'Log In' light pill + 'Get Started' dark pill (#121212, 32px radius).
5. Section Heading Block: Inter 600 at 44px, color #121212, letter-spacing -1.14px, line-height 1.09. Optional orange accent word in same size but color #ff3e00. Supporting body text below at Inter 400 17px #474645, letter-spacing -0.22px, max-width 560px. Section gap above: 120-180px.

Illustration System

The illustration system IS the brand identity - not a decoration layer. Key rules:

Character vocabulary: Organic blob shapes (no hard geometric forms) with stick limbs, expressive dot eyes, and simple mouth curves. Each character uses one dominant brand color (Ember Orange, Meadow Green, Sky Blue, Sunburst Yellow) with a darker shade for depth stroke.

Object vocabulary: Coins (gold #ffbb26 with amber stroke #d48f00), hearts (red #ff2b3a), stars (yellow), lock icons (gold), magnifying glass (blue), arrows (teal/green). All flat-filled, no gradients.

Placement rule: Hero characters bleed INTO the headline bounding box - the blue blob character's arm overlaps the 'Y' of 'Your'. This intentional overlap is the signature composition move.

Color usage in illustration: Maximum 4-5 brand colors per scene. Each character claims one color family. Avoid two characters of the same hue adjacent.

CSS token reference for illustration colors: --graphic-orange, --graphic-green, --graphic-blue, --graphic-yellow, --graphic-gold, --graphic-purple - all defined as display-p3 for wide-gamut screens.

Motion Philosophy

Motion personality is 'expressive' with 0.2s ease as the base duration (123 instances). Key patterns:

Micro-interactions: 0.1-0.2s ease for hover states on buttons (background color, box-shadow). Buttons likely scale or lighten slightly.

Illustration animation: 1s duration with cubic-bezier(0.19, 1, 0.22, 1) - the 'snappy overshoot' easing suggests characters bounce or spring into position on scroll entry.

Transition properties: Transform (103x) and opacity (44x) dominate - elements slide or fade in rather than recoloring. Box-shadow transitions (33x) animate card hover elevations.

Named animation 'hdKGda': Custom keyframe animation, likely the floating/bobbing motion on hero illustration characters.

Rule: Never use linear easing on visible UI - the brand is expressive, and linear motion reads as mechanical. Default to ease or the cubic-bezier(0.19, 1, 0.22, 1) spring curve.

Similar Brands

- Lunchbox - Same warm off-white canvas with flat illustrated characters as primary brand expression - both use illustration density to make a transactional product feel playful
- Linear - Shares the tight negative letter-spacing system and custom display typeface approach, though Linear goes dark where Family stays cream
- Notionforms - Same inset-border card technique (1px warm-toned inner ring) and Inter-based UI text system on warm-white backgrounds
- Superhuman - Pill buttons in near-black paired with a secondary cream pill - identical button pairing strategy and tight tracking on Inter headings
- Raycast - Custom display typeface reserved for hero scale while Inter handles all functional UI text - same typographic division of labor
